

Fishing for Sustainability — Round 3

Fixed-Effort (Per-Person Limit)

Name: _____

Goal

Test whether a **per-person limit** improves sustainability, fairness, and compliance.

Materials (Instructor provides)

- Reset lake to **30 fish**.
- Same 8 boats (cups).

Biological Rule

After harvest, fish remaining in the lake **double** (up to **30**).

Communication Rules (Read aloud & follow exactly)

- **Discussion Allowed (2 minutes)** to agree on **one per-person limit** (e.g., “2 fish per fisher”).
- After the 2-minute discussion ends, **no further discussion** or signaling. Everyone must follow the same per-person limit exactly.

i You may communicate (for 2 minutes max):

- Propose and agree on a **per-person limit**.

You must NOT:

- Exceed the agreed per-person limit.
- Signal or negotiate during harvesting.

Procedure

1. **Set the Per-Person Limit (group, 2 minutes):**
Per-person limit = _____ fish
2. **Harvest Exactly the Limit:** When the instructor says “**Fish!**” each fisher takes exactly the agreed limit.
3. **Reproduction:** Instructor counts remaining fish and **doubles** them (up to 30).
4. **Record** your results.

Data Table (Round 3)

Item	Value
Agreed per-person limit	
Total class catch (limit $\times$ 8)	
Fish remaining after harvest	
Fish after reproduction (doubled, max 30)	

Individual Reflection (submit with this handout)

1. Was cooperation easier with a per-person rule? Why or why not?
2. Did this round appear more sustainable than Round 1 and/or Round 2? Briefly explain.
3. Which system felt **most fair** to you: Open Access, Fixed Quota, or Fixed Effort? Why?
4. Name **one** real-world example where a per-person (effort) limit is used.

Participation Check (instructor initials when reviewed)

- ☐ Data table filled
- ☐ Four reflection answers written

Stop here. Hand this sheet in. Wait quietly for the debrief handout.
